

# Central Safety Group Inc. Monthly Event

March 2026

## MSD risks – a new approach

Book Now

**What:** MSD risks – a new approach

**Who:** Professor Jodi Oakman, Head of the Centre for Ergonomics and Human Factors, La Trobe University

**Details:** Musculoskeletal disorders (MSDs) account for more than 50% of workplace injuries and diseases, and are among the most expensive and prolonged work-related compensation claims. A pioneering approach to reducing MSDs and stress-related mental health has been developed by Professor Jodi Oakman and colleagues at La Trobe University.

Join us for an interactive Zoom session with Professor Oakman on 10 March exploring the APHIRM Toolkit. APHIRM stands for A Participative Hazard Identification and Risk Management and the free online toolkit guides workplaces through the process of identifying, assessing and controlling physical and psychosocial hazards ([www.aphirm.org.au](http://www.aphirm.org.au)).

An evidence-based system, it addresses risks from both types of hazards that, Jodi says, offers a comprehensive approach for managing workplace MSDs. Significantly, it also involves the participation of workers.

The presentation will be followed by questions and a discussion session.
